

**A brief explanation about a fixed advertisement laser installation:**

Dear Customers,

Lasers graphics and beams are the most innovative way to display messages to a huge public on many surfaces as buildings, natural surfaces as mountains or on billboards:

The system offered by Lasersonics Design Interstellar is the most reliable, easy to use and most advanced state of the art system offered on the global market. We use the finest components from recognized manufacturers as Jenoptic in Germany and Cambridge Technology, USA.

The system turns itself on, at a pre programmed degree of darkness that is appropriate for displaying laser graphics. Then it is programmed to perform for a certain period of time or shuts itself off at a certain degree of light (dusk) automatically, depending on your needs. The system can be remote controlled via IP address in order to change the content of your advertising fast.

One of the great benefits of a laser advertising system is the possibility to attract viewers from a far distance through targeted beams. These beams, when placed right through our technicians will catch the attention from people driving or walking by the billboard from far distances. And isn't it about that? People watching get attracted from far and look at the content of your billboard?

This information sheet contains a general overview of our offered system and is a guideline only, since every installation needs different components due to temperature changes, humidity, distance to projection area etc.

Please be informed that in some countries a laser advertising system needs to be approved by a governmental authority.

For further information and a tailored offer please contact us at any time.

Yours truly,

Lasersonics Design Interstellar

# Interstellar

## The general system includes:

- Air cooled 5-10 Watt Green Laser
- High Speed scanners for flicker free imaging and beam effects
- State of the art Lasershow Pangolin Software for fast change of context (only 3DMax or Macromedia Flash knowledge is required)
- Remote mirrors
- Computer
- Surface to project images and text or Billboard. We recommend a scroll action sign since it is more feasible to display normal messages during the day and a blank sign at night in order to display the laser images on it.
- Modem & DSL or Tel. line (required if remote monitoring is necessary)

## Delivery includes:

- All mentioned items above
- Installation of system
- 5 day training at our or your facilities
- 1 year warrantee on all parts
- Optional: Remote operating of content
